

Design and build your own Anderson Shelter.

During WW2, families needed to stay safe during the bombings. They built Anderson shelters, which were half buried underground and camouflaged with grass on top.

Using junk material, can you build your own Anderson shelter? It might look like a traditional shelter or you could add your own spin to it. Perhaps relating to today's current situation and having to stay at home. Maybe it could be your own safe space.

Send us your pictures of your models to the year 4 email address. We would love to see your creations!
